- Initiate the image labler

## clear all the previous content

```
clc
clear
clear all
```

## adding paths of xml files and input images

```
addpath('database');
addpath('XML Files');
```

## Initiate the image labler

init the dilog box for the input of the detector

```
prompt = {'Enter the object name to label:'};
dlg_title = 'Name';
num_lines = 1;
defaultans = {'human'};
labelType = inputdlg(prompt,dlg_title,num_lines,defaultans);

if strcmp(labelType,'laptop')
    loadImages = 'database\laptop';
elseif strcmp(labelType,'bike')
    loadImages = 'database\bike';
elseif strcmp(labelType,'human')
    loadImages = 'database\human';
end
% Initiate the image labler
trainingImageLabeler(loadImages);
```
